

## Software Interface Manual for the Automatic Operation of the Oculus Patient Data Management in the Background

By means of this interface it is possible to connect the Oculus patient data management (GO . EXE) with current data management programs. There is an interface in the Oculus Software which avoids to run the patient selection twice. It makes the patient data management to load the examination data of the patient and to call up the relevant examination program without showing the surface of the Oculus patient data management.

For the transmission of the patient's data the file DEFAULT . PAT is used. Within the file the windows-charset is used.

### The structure of this file must be as follows:

1<sup>st</sup> line: Patient's Last name  
 2<sup>nd</sup> line: Patient's First name  
 3<sup>rd</sup> line: Patient's Date of birth  
 4<sup>th</sup> line: ID-number  
 5<sup>th</sup> line: Number of the instrument  
 6<sup>th</sup> line: Comment 1  
 7<sup>th</sup> line: Comment 2  
 8<sup>th</sup> line: Comment 3  
 9<sup>th</sup> line: Comment 4  
 10<sup>th</sup> line: Comment 5  
 11<sup>th</sup> line: Date of the examination in format  
 DD MM VVVV HH-MM-SS to directly start a
